Vishwash Tank

Specialization: Application Security, VAPT, API & Mobile Security, Python Automation, Application Support

PERSONAL INFORMATION

EMAIL: vishwashtank@gmail.com
WEBSITE: vishwash-tank.netlify.app
PHONE: +91 82003 64523
LINKEDIN: in/vishwash-tank-89308b28b
LOCATION: Jaipur, Rajasthan, India
@Vola12do • @vishwashtank

TECHNICAL SKILLS

App Security:	Web & API Security Testing, Android Security, Secure SDLC, Threat Modeling, Access Control, OWASP Top 10, OWASP API Top 10, MASVS, CVSS v3.1
Security Tools:	Burp Suite, OWASP ZAP, Postman, HTTP Toolkit, MobSF, JADX, APKTool, Wireshark, Nmap, Splunk, Elastic Stack, Git
OS & Cloud:	Linux (Server Administration & Shell Scripting), Docker, Google Cloud Platform (GCP)
Programming:	C++ (OOPs), Python (Scapy, PyShark, Sockets, Hashlib, Threading), Bash Shell Scripting, SQL
IoT & Hardware:	ESP8266, ESP32, Arduino, NRF24L01, BLE Security, NTAG213 RFID, RC522, Rubber Ducky HID Injection

EXPERIENCE

Cyber Crime Intern — May 2026 – Present

Rajasthan Police Headquarters – SP Cyber Crime, Lal Kothi, Jaipur

- Conducted authorized VAPT on internal web apps and REST APIs — evaluating authentication bypass, IDOR, and broken access controls (OWASP API Security Top 10).
- Reverse-engineered Flutter Android application with MobSF, JADX, and APKTool; identified hardcoded AES-128-GCM keys and cleartext storage via entropy analysis.
- Intercepted mobile API traffic using HTTP Toolkit and Burp Suite; mapped endpoints systematically and validated authorization failures across user roles.
- Documented a critical IDOR vulnerability (CVSS v3.1: 10.0) in an enterprise web application, prepared remediation documentation, and coordinated disclosure via CERT-In.
- Built Python automation scripts for parameter fuzzing, endpoint discovery, and log correlation — accelerating API attack surface enumeration and triage.

Technical Project Associate — Dec 2025 – Apr 2026

Vikram Dental Care & National Forensic Sciences University (NFSU), Gandhinagar

- Engineered Smart Denture NFC Scanner — forensic victim identification system embedding passive RFID/NFC micro-tags into dental prosthetics for disaster identification.
- Programmed Arduino with RC522 modules to test NTAG213 tags; characterized read/write thresholds, data retention under thermal stress, and forensic recovery durability.
- Collaborated with NFSU forensic faculty to design tag memory mapping and ensure cryptographic compliance with forensic evidence admissibility standards.

Junior Cybersecurity Trainer — Aug 2024 – Feb 2025

Cyber Octet Pvt. Ltd., Ahmedabad

- Delivered instructor-led training on practical web security, network traffic analysis with Wireshark, and automated reconnaissance using Nmap.
- Built reproducible CTF lab environments demonstrating OWASP Top 10 vulnerabilities; authored comprehensive technical walk-throughs and student grading rubrics.

VULNERABILITY DISCOVERIES

[1] **Critical IDOR & Broken Access Control — CVSS 10.0.** Identified critical authorization bypass enabling unauthorized data access; responsibly disclosed via CERT-In.

[2] **Hardcoded Cryptographic Keys in Mobile App** — Discovered static AES-128 keys in decompiled bytecode via entropy analysis, allowing offline data decryption.

[3] **Broken Object Level Authorization (BOLA)** — Identified missing server-side authorization checks across REST API endpoints permitting cross-account data access.

[4] **Insecure Cleartext Local Data Storage** — Identified sensitive authentication tokens and user data stored unencrypted in local application storage.

[5] **Vertical Privilege Escalation** — Bypassed role validation checks through parameter manipulation, allowing standard accounts to execute administrative actions.

SELECTED PROJECTS

NoCTF — Labs-as-a-Service
Self-built training platform provisioning isolated ephemeral lab environments on demand. GCP backend, Docker-containerized labs, Supabase auth. Patent filed. [**website**]

WiFi Attack Toolkit (ESP8266)
Custom C++ firmware for ESP8266 microcontrollers investigating 802.11 management frame vulnerabilities — deauthentication injection, beacon flooding, and probe logging in controlled RF labs. [**GitHub**]

BLE Attack Device (ESP32 + nRF24L01)
Dual-radio embedded tool auditing Bluetooth Low Energy and 2.4 GHz protocols. Implements BLE advertisement spoofing, GATT service enumeration, and proximity spoofing on IoT devices. [**GitHub**]

SOARX Security Dashboard
Real-time security telemetry and server health monitoring dashboard built with Python. Aggregates host metrics, active daemon states, and threshold alerts for lightweight production lab setups. [**website**]

Rubber Ducky USB Automation
Keystroke injection payload suite utilizing Rubber Ducky scripting to assess physical workstation defenses — automated triage droppers, reverse shells, and persistence verification. [**GitHub**]

SIEM Deployment Lab — Elastic Stack
Centralized logging infrastructure using Elasticsearch, Logstash, and Kibana. Configured Linux auditd ingestion, Windows Event Forwarding, and Suricata IDS alert pipelines for threat correlation.

CORE COMPETENCIES

- **Log & Alert Analysis:** Read logs and alerts in Splunk and Elasticsearch to figure out what broke and why.
- **API Debugging:** Postman, Burp, HTTP Toolkit to trace failed requests, odd status codes, bad payloads.
- **Android Pentesting:** MobSF, JADX, APKTool to decompile apps, find hardcoded keys & cleartext storage.
- **Web & API Pentesting:** Burp Suite, ZAP, Nmap for IDOR, BOLA, privilege escalation, OWASP Top 10.
- **Linux & Scripting:** Linux, SSH, Bash & Python scripts for fuzzing, endpoint discovery, log correlation.
- **Monitoring (lab):** Built SOARX in Python to track host health, daemon status and threshold alerts.
- **Docker & Cloud:** Run lab environments in Docker containers on GCP (NoCTF), Git for version control.
- **SQL:** Basic queries and data checks.
- **Reports & RCA:** Findings, root cause and fix steps written so devs can follow (CERT-In, Medium).
- **FDE, Cybersecurity (basic):** Forward Deployed Engineer basics: client-side VAPT, SIEM setup.

EDUCATION

Bachelor of Computer Science (B.Sc.) **2023 – 2026**
Gujarat University, Ahmedabad • CGPA: 7.48 • First Class with Distinction

CERTIFICATIONS

Advance Diploma in Cyber Security • **Pursuing: eJPT** — eLearnSecurity Junior Penetration Tester

TECHNICAL WRITING

Publishes technical cybersecurity research, vulnerability disclosure methodologies, and Android reverse engineering write-ups on **Medium (@vishwashtank)** — written for practitioners and engineering teams. [**Medium**]

LANGUAGES

English (Professional) • **Hindi** (Native) • **Gujarati** (Native) • **Italian** (Learning)

PROFILE

Security and support practitioner with grounded expertise in application security, API troubleshooting, and Linux system automation. Dedicated to reproducible diagnostics, root-cause isolation, and secure engineering practices. Proven self-starter with strong ownership mindset and rapid adaptability to production stacks.
